

LAB 3 – ARCHITECTURE JUSTIFICATION

Project: Personal Subscription & Recurring Expense Auditor

NAME	SRN	SECTION
PRARTHANA SHIVAKUMAR	PES1UG24CS339	F

Architecture Selection

We chose Layered Architecture for the Personal Subscription & Recurring Expense Auditor.

Reasons for the Choice

1. It separates the user interface, subscription processing and data storage, making the system easier to understand and maintain.
2. The main functions such as transaction import, subscription analysis, alerts and expense management can be handled in separate business components.

Security Advantage

The data layer keeps financial transaction data separate from the user interface. This makes it easier to control access to sensitive financial information.

Performance Benefit

The application can process and store transaction data through the data layer without putting database operations directly in the user interface, which keeps the interface responsive.

Components Used

User Interface, Transaction Import, Subscription Analysis, Renewal Alert, Expense Management, and Financial Data Repository.
