Requirement 3

Use-Case Flow Document

Use Case: UC-02 Identify Recurring Subscriptions

Preconditions

- > The user has imported at least one set of transactions (UC-01: Import Transactions).
- > The imported transaction data is available for analysis.

Postconditions

- > Recurring subscriptions are identified and stored with their renewal dates.
- > The user can view the list of identified subscriptions.

Main Success Scenario

1. User selects "Identify Subscriptions" from the dashboard.
2. System includes UC-07 (Analyse Transaction Data) to process the imported records.
3. System groups the analysed transactions by merchant name and looks for repeating charges .
4. System marks a group as a recurring subscription if the same charge appears on a regular interval .
5. System stores the subscription name, amount, and next expected renewal date.
6. System displays the list of identified subscriptions to the user.
7. Use case ends successfully.

Alternate Flow

3a. No Recurring Pattern Found

3a1. System does not find any repeating charges in the analysed transaction data.

3a2. System displays a message: "No recurring subscriptions found."

3a3. Use case ends.
