Problem Statement #32 - Personal Subscription & Recurring Expense Auditor

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall analyze transaction logs to identify recurring billing patterns and project total monthly subscription expenditure.	High	Pass: Recurring service identified and renewal date logged. Fail: One time payment misclassified as subscription.	Core function of the app; users need to know what they are subscribed to.
FR-002	Functional	The system shall allow a user to import transactions from a bank statement file (CSV/OFX).	High	Pass: Uploaded CSV/OFX file is read and transactions appear in the list. Fail: File is uploaded but no transactions appear.	The app needs transaction data before it can find subscriptions.
FR-003	Functional	The system shall alert the user at least 3 days before a subscription renewal date.	High	Pass: Alert appears/is sent 3 days before the stored renewal date. Fail: No alert appears or it appears after the renewal date.	Users need advance warning so they can cancel before being charged.
FR-004	Functional	The system shall display a breakdown of the monthly burn rate showing how much each active subscription contributes to the total.	Medium	Pass: Breakdown lists every active subscription with its cost and the amounts sum to the displayed total. Fail: A subscription is missing from the breakdown or the amounts do not add up.	Helps users see which subscriptions cost the most, not just the overall total.
FR-005	Functional	The system shall display a step-by-step cancellation guide when a user selects a subscription.	Medium	Pass: Selecting a subscription shows a guide with at least one step. Fail: No guide is shown or it is empty.	Users often do not know how to cancel a subscription.
NFR-001	Nonfunctional	Financial transaction imports (CSV/OFX) must parse securely without storing raw banking credentials in cleartext.	High	Pass: Stored data contains no plaintext banking credentials, confirmed by checking the saved file/database. Fail: Any credential is found stored in plaintext.	Protects sensitive financial data from being exposed.
NFR-002	Nonfunctional	The system shall load the subscription dashboard within 3 seconds for up to 100 imported transactions.	Medium	Pass: Dashboard loads in 3 seconds or less when tested with 100 transactions. Fail: Load time exceeds 3 seconds.	Users should not have to wait long to see their subscriptions.
